

Problem

Let X and Y be jointly continuous random variables such that $X \sim \text{Unif}(0,1)$ (that is, $f_X(x) = 1$ for $0 < x < 1$) and the conditional probability density function of Y given X is:

$$f_{Y|X}(y|x) = \sqrt{x} * e^{-\sqrt{x}*y}, y > 0.$$

Find $\mathbb{E}[Y|X = x]$ for each $x \in (0,1)$, and calculate $\mathbb{E}[Y] + 9$.

Solution

We compute

$$\mathbb{E}[Y|X = x] = \int_0^{\infty} y * f_{Y|X}(y|x) dy = \int_0^{\infty} y * \sqrt{x} * e^{-\sqrt{x}*y} dy = \frac{1}{\sqrt{x}}.$$

Then,

$$\mathbb{E}[Y] = \int_0^1 \mathbb{E}[Y|X = x] * f_X(x) dx = \int_0^1 \frac{1}{\sqrt{x}} dx = 2.$$

Thus,

$$\mathbb{E}[Y] + 9 = 2 + 9 = \mathbf{11}$$

Answer: 11
